

THAT WHICH IS CLAIMED IS:

1. A vehicle control system for a vehicle comprising a vehicle data communications bus and at least one vehicle device connected thereto, the vehicle control system comprising:

5 at least one uniquely coded transmitter to be carried by a user;

 a receiver at the vehicle for receiving signals from said at least one uniquely coded transmitter; and

10 a controller at the vehicle and connected to said receiver and the vehicle data communications bus for

 communicating with the at least one vehicle device via the data communications bus,

15 learning the at least one uniquely coded transmitter to permit control of a vehicle function by the user, and

 causing an indication of whether at least one new uniquely coded transmitter has been learned.

2. A vehicle control system according to Claim 1 wherein the at least one vehicle device comprises a vehicle indicator; and wherein said controller communicates with the vehicle indicator via

5 the vehicle data communications bus to cause the indication of whether at least one new uniquely coded transmitter has been learned.

3. A vehicle control system according to Claim 2 wherein the vehicle indicator comprises at

least one of a light, a visual display, a vibration
transducer, a speech message generator, and an audible
5 signal generator.

4. A vehicle control system according to
Claim 2 wherein the vehicle further comprises an
instrument panel carrying the vehicle indicator.

5. A vehicle control system according to
Claim 1 wherein the at least one vehicle device
comprises a vehicle sensor; and wherein said controller
communicates with the vehicle sensor via the vehicle
5 data communications bus.

6. A vehicle control system according to
Claim 1 wherein the at least one vehicle device
comprises a vehicle alarm indicator; and wherein said
controller communicates with the vehicle alarm
5 indicator via the vehicle data communications bus.

7. A vehicle control system according to
Claim 1 wherein the at least one vehicle device
comprises a controllable vehicle device; and wherein
said controller communicates with the controllable
5 vehicle device via the vehicle data communications bus.

8. A vehicle control system according to
Claim 7 wherein the controllable vehicle device is
associated with starting of a vehicle engine.

9. A vehicle control system according to
Claim 7 wherein the controllable vehicle device is
associated with vehicle door locks.

10. A vehicle control system according to Claim 1 wherein said controller is switchable to a learning mode to permit learning of the at least one uniquely coded transmitter; and wherein said controller
5 causes an indication that the learning mode has been entered.

11. A vehicle control system according to Claim 10 wherein said controller causes an indication when the learning mode has last been entered.

12. A vehicle control system according to Claim 10 wherein said controller causes an indication for progressively indicating a passage of time since the learning mode has last been entered.

13. A vehicle control system according to Claim 1 wherein said controller causes an indication of a number of learned uniquely coded transmitters.

14. A vehicle control system according to Claim 1 wherein said controller causes an indication of a change in a number of learned uniquely coded transmitters.

15. A vehicle control system according to Claim 1 wherein said controller causes an indication of a change in a code of at least one learned uniquely coded transmitter.

16. A vehicle control system according to Claim 1 wherein said at least one uniquely coded transmitter comprises at least one uniquely coded remote transmitter.

1004307-010502

17. A vehicle control system according to Claim 1 wherein said at least one uniquely coded transmitter comprises at least one uniquely coded transponder transmitter.

18. A vehicle control system for a vehicle comprising a vehicle data communications bus and a vehicle indicator connected thereto, the vehicle control system comprising:

5 at least one uniquely coded transmitter to be carried by a user;

 a receiver at the vehicle for receiving signals from said at least one uniquely coded transmitter; and

10 a controller at the vehicle and connected to said receiver and the vehicle data communications bus for

 learning the at least one uniquely coded transmitter to permit control of a vehicle function by the user, and

15 communicating with the vehicle indicator via said data communications bus to cause an indication of whether at least one new uniquely coded transmitter has been
20 learned.

19. A vehicle control system according to Claim 18 wherein the vehicle indicator comprises at least one of a light, a visual display, a vibration transducer, a speech message generator, and an audible
5 signal generator.

20. A vehicle control system according to Claim 18 wherein the vehicle further comprises an instrument panel carrying the vehicle indicator.

21. A vehicle control system according to Claim 18 wherein the vehicle further comprises a vehicle sensor; and wherein said controller communicates with the vehicle sensor via the vehicle data communications bus.

22. A vehicle control system according to Claim 18 wherein the vehicle further comprises a vehicle alarm indicator; and wherein said controller communicates with the vehicle alarm indicator via the vehicle data communications bus.

23. A vehicle control system according to Claim 18 wherein the vehicle further comprises a controllable vehicle device; and wherein said controller communicates with the controllable vehicle device via the vehicle data communications bus.

24. A vehicle control system according to Claim 18 wherein said controller is switchable to a learning mode to permit learning of the at least one uniquely coded transmitter; and wherein said controller causes an indication that the learning mode has been entered.

25. A vehicle control system according to Claim 24 wherein said controller causes an indication when the learning mode has last been entered.

26. A vehicle control system according to Claim 24 wherein said controller causes an indication

10043077-010902

for progressively indicating a passage of time since the learning mode has last been entered.

27. A vehicle control system according to Claim 18 wherein said controller causes an indication of a number of learned uniquely coded transmitters.

28. A vehicle control system according to Claim 18 wherein said controller causes an indication of a change in a number of learned uniquely coded transmitters.

29. A vehicle control system according to Claim 18 wherein said controller causes an indication of a change in a code of at least one learned uniquely coded transmitter.

30. A vehicle control system for a vehicle comprising a vehicle data communications bus and at least one vehicle device connected thereto, the vehicle control system comprising:

5 a biometric characteristic sensor for sensing a unique biometric characteristic of a user; and

 a controller at the vehicle and connected to said biometric characteristic sensor and the vehicle data communications bus for

10 communicating with the at least one vehicle device via the data communications bus,

 learning the unique biometric characteristic to permit control of a vehicle function by the user, and

15 causing an indication of whether at least one new unique biometric characteristic has been learned.

4005307.010501

31. A vehicle control system according to
Claim 30 wherein the at least one vehicle device
comprises a vehicle indicator; and wherein said
controller communicates with the vehicle indicator via
5 the vehicle data communications bus to cause the
indication of whether at least one new unique biometric
characteristic has been learned.

32. A vehicle control system according to
Claim 31 wherein the vehicle indicator comprises at
least one of a light, a visual display, a vibration
transducer, a speech message generator, and an audible
5 signal generator.

33. A vehicle control system according to
Claim 31 wherein the vehicle comprises an instrument
panel carrying the vehicle indicator.

34. A vehicle control system according to
Claim 30 wherein the at least one vehicle device
comprises a vehicle sensor; and wherein said controller
communicates with the vehicle sensor via the vehicle
5 data communications bus.

35. A vehicle control system according to
Claim 30 wherein the at least one vehicle device
comprises a vehicle alarm indicator; and wherein said
controller communicates with the vehicle alarm
5 indicator via the vehicle data communications bus.

36. A vehicle control system according to
Claim 30 wherein the at least one vehicle device
comprises a controllable vehicle device; and wherein

100-307-04002

said controller communicates with the controllable
5 vehicle device via the vehicle data communications bus.

37. A vehicle control system according to
Claim 36 wherein the controllable vehicle device is
associated with starting of a vehicle engine.

38. A vehicle control system according to
Claim 36 wherein the controllable vehicle device is
associated with vehicle door locks.

39. A vehicle control system according to
Claim 30 wherein said controller is switchable to a
learning mode to permit learning of the at least one
uniquely coded transmitter; and wherein said controller
5 causes an indication that the learning mode has been
entered.

40. A vehicle control system according to
Claim 39 wherein said controller causes an indication
when the learning mode has last been entered.

41. A vehicle control system according to
Claim 39 wherein said controller causes an indication
for progressively indicating a passage of time since
the learning mode has last been entered.

42. A vehicle control system according to
Claim 30 wherein said controller causes an indication
of a number of learned uniquely coded transmitters.

43. A vehicle control system according to
Claim 30 wherein said controller causes an indication
of a change in a number of learned uniquely coded
transmitters.

100-307-04000

44. A vehicle control system according to Claim 30 wherein said controller causes an indication of a change in a code of at least one learned uniquely coded transmitter.

45. A vehicle control system according to Claim 30 wherein said biometric sensor comprises at least one of a fingerprint sensor, a voice pattern sensor, a facial pattern sensor, a skin pattern sensor, a hand pattern sensor, a venous pattern sensor and a retinal pattern sensor.

46. A vehicle control method for a vehicle comprising a vehicle data communications bus and at least one vehicle device connected thereto, the method comprising:

receiving signals from at least one uniquely coded transmitter at a receiver at the vehicle; and using a controller at the vehicle and connected to the receiver and the vehicle data communications bus for

communicating with the at least one vehicle device via the data communications bus,

learning the at least one uniquely coded transmitter to permit control of a vehicle function by the user, and causing an indication of whether at least one new uniquely coded transmitter has been learned.

47. A method according to Claim 46 wherein the at least one vehicle device comprises a vehicle indicator; and wherein said controller communicates

with the vehicle indicator via the vehicle data
5 communications bus to cause the indication of whether
at least one new uniquely coded transmitter has been
learned.

48. A method according to Claim 47 wherein
the vehicle indicator comprises at least one of a
light, a visual display, a vibration transducer, a
speech message generator, and an audible signal
5 generator.

49. A method according to Claim 47 wherein
the vehicle further comprises an instrument panel
carrying the vehicle indicator.

50. A method according to Claim 46 wherein
the at least one vehicle device comprises a vehicle
sensor; and wherein said controller communicates with
the vehicle sensor via the vehicle data communications
5 bus.

51. A method according to Claim 46 wherein
the at least one vehicle device comprises a vehicle
alarm indicator; and wherein said controller
communicates with the vehicle alarm indicator via the
5 vehicle data communications bus.

52. A method according to Claim 46 wherein
the at least one vehicle device comprises a
controllable vehicle device; and wherein said
controller communicates with the controllable vehicle
5 device via the vehicle data communications bus.

53. A method according to Claim 46 wherein
said controller is switchable to a learning mode to

110013077 010000

permit learning of the at least one uniquely coded transmitter; and wherein said controller causes an indication that the learning mode has been entered.

54. A method according to Claim 46 wherein said controller causes an indication of a number of learned uniquely coded transmitters.

55. A method according to Claim 46 wherein said controller causes an indication of a change in a number of learned uniquely coded transmitters.

56. A method according to Claim 46 wherein said controller causes an indication of a change in a code of at least one learned uniquely coded transmitter.

57. A vehicle control method for a vehicle comprising a vehicle data communications bus and at least one vehicle device connected thereto, the method comprising:

- 5 sensing a unique biometric characteristic of a user from a biometric characteristic sensor; and
- using a controller at the vehicle and connected to said biometric characteristic sensor and the vehicle data communications bus for
- 10 communicating with the at least one vehicle device via the data communications bus,
- learning the unique biometric characteristic to permit control of a vehicle
- 15 function by the user, and
- causing an indication of whether at least one new unique biometric characteristic has been learned.

58. A method according to Claim 57 wherein
the at least one vehicle device comprises a vehicle
indicator; and wherein said controller communicates
with the vehicle indicator via the vehicle data
5 communications bus to cause the indication of whether
at least one new uniquely coded transmitter has been
learned.

59. A method according to Claim 58 wherein
the vehicle indicator comprises at least one of a
light, a visual display, a vibration transducer, a
speech message generator, and an audible signal
5 generator.

60. A method according to Claim 58 wherein
the vehicle further comprises an instrument panel
carrying the vehicle indicator.

61. A method according to Claim 57 wherein
the at least one vehicle device comprises a vehicle
sensor; and wherein said controller communicates with
the vehicle sensor via the vehicle data communications
5 bus.

62. A method according to Claim 57 wherein
the at least one vehicle device comprises a vehicle
alarm indicator; and wherein said controller
communicates with the vehicle alarm indicator via the
5 vehicle data communications bus.

63. A method according to Claim 57 wherein
the at least one vehicle device comprises a
controllable vehicle device; and wherein said

4004307.010902

controller communicates with the controllable vehicle
5 device via the vehicle data communications bus.

64. A method according to Claim 57 wherein
said controller is switchable to a learning mode to
permit learning of the at least one uniquely coded
transmitter; and wherein said controller causes an
5 indication that the learning mode has been entered.

65. A method according to Claim 57 wherein
said controller causes an indication of a number of
learned uniquely coded transmitters.

66. A method according to Claim 57 wherein
said controller causes an indication of a change in a
number of learned uniquely coded transmitters.

67. A method according to Claim 57 wherein
said controller causes an indication of a change in a
code of at least one learned uniquely coded
transmitter.
